# Chapter 1

## Low precision DS1302 RTC library for Arduino

This is a 3-wire [DS1302](#) RTC (Real Time Clock) library for Arduino.

### Library features

- Read / write RTC date and time.
- Read / write 31 Bytes battery backedup RTC RAM.
- Optimized IO interface for AVR targets (Maximum 169kHz CLK Arduino UNO with 16MHz XTAL).

### [DS1302](#) specifications

#### IMPORTANT NOTES:

- The [DS1302](#) RTC time may deviate up to 1 minute each day, so this device is not recommended for designs with high precision requirements.
- Use the high precision DS3231 I2C RTC instead for new designs.
- The 3-wire interface is **NOT** compatible with SPI.

### Examples

Arduino IDE | File | Examples | Erriez [DS1302](#):

- [Alarm](#): Program one or more alarms.
- [GettingStarted](#): Getting started example.
- [PrintDateTime](#): Print date and time with PROGMEM strings.
- [RAM](#): Read/write RTC RAM.
- [SetDateTime](#): Set date time.
- [SetTrickleCharger](#): Program trickle battery/capacitor charger.
- [SquareWave1Hz](#): 1Hz square wave output on DIGITAL pin.
- [Terminal Python](#): script to set date time.
